

## **Module:BDAT-1000 Data Manipulation Techniques**

**Assignment: Assignment 1**

**Student Name: Faruk Furkan KOC**

**Student Number: 200471957**

## DATABASE EXPLANATION:

In this project we were given a excel sheet. We needed to put all the information from excel sheet into database. I decided to put all do information in different categories .To do that, I created 6 tables:

### 1)Persons Table

In the excel sheet there are some information that can be used to get information about an user. Persons table keep all the personal information. I used insert method for getting necessary information from the excel sheet. There are pictures below show how I created the table, how I get the information from excel and what I created from it.

```
Run Cancel Disconnect Change Connection faruk
1
2 CREATE TABLE [dbo].[Persons](
3     [Id] [int] NOT NULL PRIMARY KEY,
4     [Name] [varchar](25) NOT NULL,
5     [Gender] [varchar](25) NOT NULL,
6     [Age] [int] NULL,
7     [Ethnicity] [varchar](25) NULL,
8     [EyeColor] [varchar](25) NOT NULL,
9     [Leg] [varchar](25) NULL
10 );
```

```
Run Cancel Disconnect Change Connection faruk Explain Enable SQLCMD Export as Notebook
1 INSERT INTO [dbo].[Persons]
2 ( -- Columns to insert data into
3  [Id], [Name], [Gender], [Age], [Ethnicity], [EyeColor], [Leg]
4 )
5 VALUES
6 (1, 'Andrew Arpin', 'Male', '21', 'Caucasian', 'Blue', 'Right'),
7 (2, 'Huda Tanveer Siddiqui', 'Female', '35', 'Pakistani', 'Black', 'Right'),
8 (3, 'Jhoana Romero', 'Female', '35', 'NULL', 'Brown', 'Right'),
9 (4, 'Akshara Ashok', 'Female', '21', 'Indian', 'Dark Brown', 'Right'),
10 (5, 'Ali ', 'Male', '26', 'Arab', 'Black', 'Right'),
11 (6, 'Harsh Patel', 'Male', '24', 'Indian', 'Black', 'Right'),
12 (7, 'Amrit', 'female', '24', 'Indian', 'brown', 'Right'),
13 (8, 'Babitha Soniya Lewis', 'Female', '27', 'Indian', 'black', 'Right'),
14 (9, 'Jojin George', 'Male', '22', 'Indian', 'Dark Brown', 'Right'),
15 (10, 'Shivam Patel', 'Male', '23', 'Indian', 'Brown', 'Right'),
16 (11, 'Bridget Ndubuisi', 'Female', '28', 'African', 'Brown', 'Right'),
17 (12, 'Emine Guler', 'Female', '30', 'Turkish', 'Brown', 'Right'),
18 (13, 'Sanat Khare', 'Male', '22', 'Indian', 'Black', 'Right'),
19 (14, 'Pranav Amin', 'Male', '23', 'Gujarati', 'Black', 'Right'),
20 (15, 'Kernel Prieto', 'Male', '41', 'Latino', 'Black', 'Right'),
21 (16, 'Ashlesh Sheth', 'Male', '22', 'Indian', 'Brown', 'Right'),
22 (17, 'Xuehao Xiang', 'Male', '22', 'Chinese', 'Black', 'Right'),
23 (18, 'Faruk Furkan', 'Male', '27', 'Turkish', 'Brown', 'Left'),
24 (19, 'Emma Bognar', 'Female', '22', 'Caucasian', 'Blue', 'Right'),
25 (20, 'Jhanvi Vaghela', 'Female', '22', 'Indian', 'Black', 'Right'),
26 (21, 'Deepika Goyal', 'Female', '26', 'Indian', 'Black', 'Right'),

## 5) Personal Dislike Table

I used this table to store users dislikes. There are pictures below show how I created the table, how I put information in it and display of the table.

The screenshot displays the SQL Server Enterprise Manager interface. At the top, a toolbar includes buttons for 'Run', 'Cancel', 'Disconnect', and 'Change Connection', along with a dropdown menu showing the connection name 'faruk'. Below the toolbar, a SQL script is shown in a text editor. The script consists of two parts: a 'CREATE TABLE' statement and an 'INSERT INTO' statement. The 'CREATE TABLE' statement defines a table named '[dbo].[Dislikes]' with two columns: '[DislikeId] [int] NOT NULL PRIMARY KEY,' and '[DislikedApplication] [varchar](25) NOT NULL'. The 'INSERT INTO' statement inserts 26 rows of data into the table. The data includes various applications and services, such as 'MS Access', 'All IT Development Applications', 'TikTok', 'Tinder', 'Ontario Driving test', 'Facebook', 'PUBG', 'TikTok', 'All govt application', 'Tinder', 'ILETI (Kind of Turkish whatsapp)', 'Blackboard!!', 'Facebook', 'Facebook', 'TikTok', 'Facebook!!!!', 'TikTok', 'Any postgrad application site', 'TIKTOK', 'Tik Tok', 'Tiktok', 'NULL', 'Zoooooom!!!', 'Facebook', and 'Anything'. The script is numbered from 1 to 34. Below the script, a 'Messages' pane shows the execution results. It indicates that the query started at 15:40:08, affected 26 rows, and took 00:00:00.017 seconds to execute.

```

## Database Design Diagram

There is a diagram below that shows the relations between the tables. As you can see the diagram I created ID for all the tables and I made them primary key.

## Problems

There were some problems occur during the creation of my database.

1) When I was creating my database I did not think that there would be some missing information in the excel sheet so I made my column NOT NULL and error occurred when I execute the query.

2) I gave VARCHAR(25) I thought the length would be okay but some errors occurred so I had to alter the table. The picture below shows a sample of how I solved first two problems. When an error occurs I altered the table as it is supposed to be. As you can see I changed VARCHAR(25) to VARCHAR(250) and NOT NULL to NULL.

alterTabla.sql ×

Users > farukfurkankoc > Desktop > DataManipulation > alterTabla.sql

```
1 ALTER TABLE dbo.TravelHistory
2 ALTER COLUMN CountriesBeenTo VARCHAR(250) NULL;
3
```

3)When I first designed the database in my mind I thought I could get all the information from excel using insert method. However it was not possible I am a Mac user and it took for me to find how to do that in the internet. So I copied everything from excel sheet and paste the into my tables using insert method.

4)When I tried to put dates into the table it did not work because of the format so I did not use date information. Unfortunately I was not able to fix that problem

5)Normally when you give relations to table SQL automatically creates foreign keys I did not have that feature in Azure Studio so I could not create foreign keys.
